

## **Questions and Answers for Project No. 659-13-101**

### **Renovate Medical/Surgical Nursing Units on Floors 2-3 for Patient Privacy**

1. Drawing FD101 demolition note states that we are to remove sprinkler heads and piping back to the main where other disciplines are installing new work. It further states that we are responsible for removal of the sprinkler main if it interferes with other disciplines new work. Can you please provide us with a copy of the as-built sprinkler drawings for the renovated areas so that we will know the size and the location of the existing mains?

**Record drawings are in the attachment zip file (Building2.zip).**

2. Can you please provide us with the results of a recent fire hydrant flow test? This test must include the static pressure, the residual pressure and the flow in gallons per minute.

**No flow test will be provided or required.**

3. Regarding headwalls – Will you provide construction details (med gas tie ins are they in the wall, above ceiling; surface mount units, recessed?) for the walls that the headwall units will be mounted?

**Contractor to price what AE is using for the basis of design.**

4. Drawing EL-101, note 2 references drawing E-502. There isn't an E-502 drawing. Will you please provide this drawing? This is a typo.

**Attachment Generator Transfer Device Wiring for Emergency Light Fixtures.pdf should be added to sheet E502, and reference on EL101 changed to E502.**

5. Will exterior chute(s) be allowed for demo?

**Yes, exterior chutes will be allowed.**
